MoS₂ - Lubricating Stick for Dry Lubrication

MOLYDUVAL Schmierstift WO is a useful, easy applicable MoS₂ - Lubricant for lubrication of metalworking tools. It forms a thin friction and wear reducing dry lubrication coat.

Best practical experiences in reduced wear are reported in case of short disrupted cuts, and in cases of metallic friction.

Properties

- longer tool life
- good surface texture
- easy application
- reduces wear and friction

Applications

- for tools in metalworking
- for saws: for easy application of a lubricating film in the swage section of the tooth point, whereby a single lubrication is sufficient also for various swagings of the teeth to achieve the required swaging width.
- for knives
- for lubrication of other dry sliding surfaces

How To Use

Apply onto clean surface
